

"Budget" Vertical Mixer

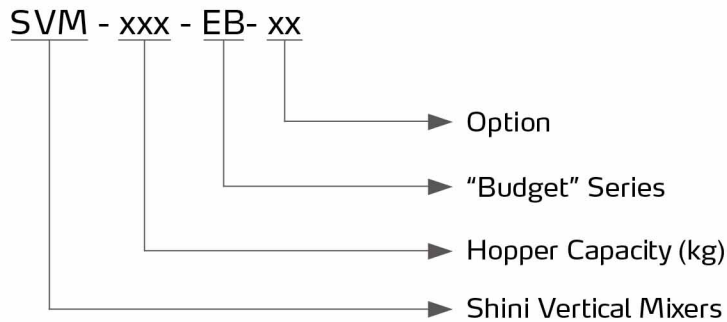

SVM-100-EB

Refer carefully to this manual before operation.

SVM-EB Series

■ Coding Principle

■ Features

- Stainless steel hopper receiver and mixing blade ensure no material contamination and durability.
- Hopper lid has protective device. Stop machine when open the hopper lid to avoid danger caused by misoperation.
- It equips with motor overload protection to avoid motor overload and burnout.
- Auto stop device is provided, and the auto stop function can be set within 0~300 hr.

Control Panel

■ Application

SVM-EB Sseries are mainly used for mixing plastics as raw materials, masterbatch and recycled materials. SVM-EB can not be used dealing with plastic powder and all kinds of foods, chemicals, and inflammable, explosive and volatile materials. Bulk density should be taken into account when the dimension of material is uneven or in other forms.

■ Working Principle

SVM-EB series are driven by motor. As the rotation of blades, the materials are mixed and then be conveyed to corresponding containers, achieving the purpose of uniform mixing.

Control box sends signal to the motor, and it starts rotating. Motor main shaft drives blades to mix different materials with the rotation, which evenly mix the material in short cycle. When timer of the control box reaches set time, the motor stops. At this time, open the discharge port of the hopper, and discharge the material. Then, the mixing is finished (During the process, if the mixing is overloaded, the buzzer will sound with alarm).

Outline Drawings

Specifications

Model	SVM-25-EB	SVM-50-EB	SVM-100-EB	SVM-150-EB	SVM-200-EB	SVM-300-EB
Motor Power (kW)	1.1	1.5	3.0	4.0	7.5	11
Max. Throughput (kg/hr)	125	250	500	750	1000	1500
Blending Barrel* (kg)	25	50	100	150	200	300
Dimensions	H (mm)	920	1085	1115	1245	1610
	H1 (mm)	420	487	495	495	785
	D (mm)	830	861	1070	1070	1180
	W (mm)	935	965	1150	1150	1280
Weight(kg)	90	120	170	250	340	385

- Notes: 1) "*" means when overloaded, the optimal mixing time is about 10 mins.
 2) Maximum noise level is 80dB (A).
 3) All output capacities from above models are based on data from bulk density 0.65Kg/L and 2-3 mm in size.
 4) Maximum throughput is 5 batches in hourly mixing, with 10mins for each batch, which is calculated by maximum capacity of the hopper.
 5) Power supply: 3 Φ 400VAC 50Hz
